ONCOTYPE DX

Dr. Francisco Domínguez

**Departamento de Cirugía Oncológica
Facultad de Medicina
Pontificia Universidad Católica de Chile**

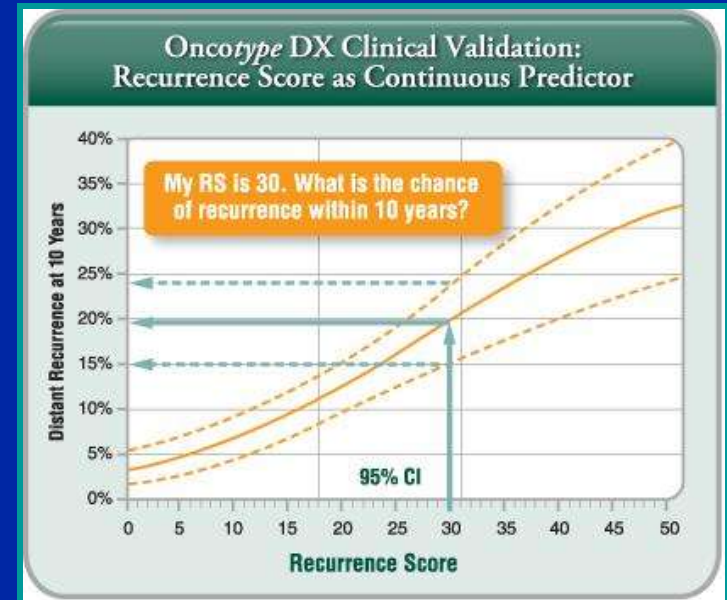

Conceptos generales

- **Diagnóstico y decisiones terapéuticas basados en criterios patológicos e inmunohistoquímicos**
- **Necesidad de un enfoque más racional, cuantitativo e individualizado**
- **Uso de QT en pacientes N0, RE+:**
 - Beneficio escaso**
 - Asume un beneficio igual en todas las pacientes**
 - Algunas pacientes son subtratadas**
 - Muchas pacientes son sobretratadas**

Conceptos generales

- Estudio de 21 genes que predice en forma personalizada el riesgo de recurrencia y el beneficio de la quimioterapia para pacientes N0 y RE positivo
- Laboratorio Genomic Health, CA, US
- Realizado en 90.000 pacientes
- Estudios en 4.000 pacientes
- Cubierto por Medicare y 90% seguros de salud privados
- US\$ 3.978

Conceptos generales

Recomendacion NCCN Oncotype Dx:

- Tumores 0.6 a 1.0 cms con características desfavorables
- Tumores > 1 cms, N0, RE+, HER 2 neg

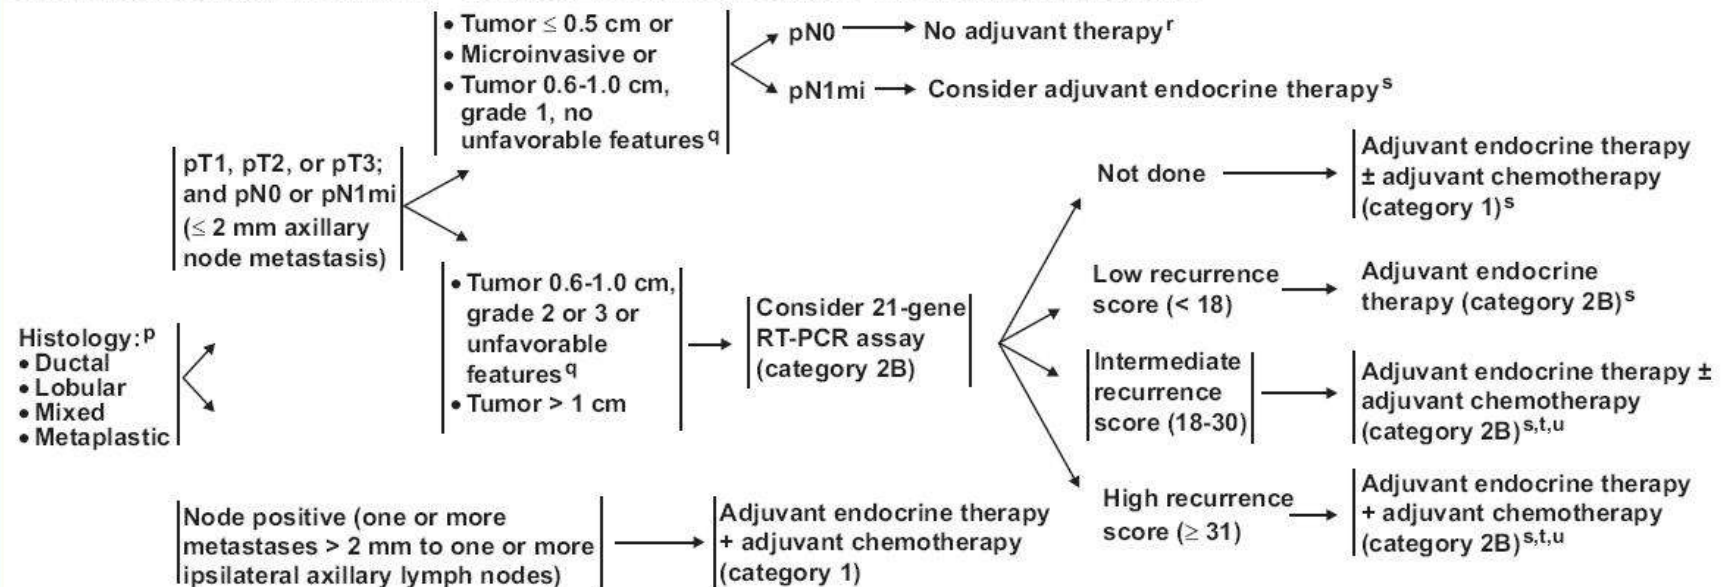

NCCN®

Practice Guidelines
in Oncology – V.2.2010

Invasive Breast Cancer

SYSTEMIC ADJUVANT TREATMENT - HORMONE RECEPTOR POSITIVE - HER2 NEGATIVE DISEASE^b

Conceptos generales

Recomendacion ASCO Oncotype Dx:

- **Predecir riesgo de recurrencia en pacientes tratados con tamoxifeno**
- **Predecir mejor respuesta a Tamoxifeno y evitar uso QT**
- **Identificar pacientes con mayor beneficio de la QT**

American Society of Clinical Oncology 2007 Update of Recommendations for the Use of Tumor Markers in Breast Cancer

Lyndsay Harris, Herbert Fritsche, Robert Menckel, Larry Norton, Peter Ravdin, Sheila Taube, Mark R. Somerfield, Daniel F. Hayes, and Robert C. Bast Jr

Multiparameter gene expression analysis for breast cancer (Note: This topic is new to the guideline)

In newly diagnosed patients with node-negative, estrogen-receptor positive breast cancer, the Oncotype DX assay can be used to predict the risk of recurrence in patients treated with tamoxifen. Oncotype DX may be used to identify patients who are predicted to obtain the most therapeutic benefit from adjuvant tamoxifen and may not require adjuvant chemotherapy. In addition, patients with high recurrence scores appear to achieve relatively more benefit from adjuvant chemotherapy (specifically CMF) than from tamoxifen. There are insufficient data at present to comment on whether these conclusions generalize to hormonal therapies other than tamoxifen, or whether this assay applies to other chemotherapy regimens. The precise clinical utility and appropriate application for other multiparameter assays, such as the MammaPrint assay, the "Rotterdam Signature," and the Breast Cancer Gene Expression Ratio are under investigation.

Validación Clínica ONCOTYPE DX: Recurrencia a distancia según RS

| Category | RS (0 -100) |
|-----------|--------------|
| Low risk | RS <18 |
| Int risk | RS 18 - 30 |
| High risk | RS \geq 31 |

Validación Clínica ONCOTYPE DX: Recurrencia a distancia según RS

| Risk Group | % of Patients | 10-yr Rate of Recurrence | 95% CI |
|-------------------------|---------------|--------------------------|--------------|
| Low (RS <18) | 51% | 6.8% | 4.0%, 9.6% |
| Intermediate (RS 18-30) | 22% | 14.3% | 8.3%, 20.3% |
| High (RS \geq 31) | 27% | 30.5% | 23.6%, 37.4% |

Test for the 10-year Distant Recurrence comparison between the low-and high-risk groups: $P < 0.001$

Validación Clínica ONCOTYPE DX: Recurrencia a distancia según RS

Multivariate Cox Models: Age, Size + RS

| Variable | Hazard Ratio | 95% CI | P value |
|------------------|--------------|--------------|---------|
| Age < 50 | 0.71 | (0.48, 1.05) | 0.084 |
| Size > 2.0 cm | 1.26 | (0.86, 1.85) | 0.231 |
| Recurrence Score | 3.21 | (2.23, 4.61) | <0.001 |

Age at surgery used as a binary factor: 0 = <50 yr, 1 = ≥50 yr.

Clinical tumor size (CTS) used as a binary factor: 0 = ≤2 cm, 1 = >2 cm.

Recurrence Score used as a continuous variable, with HR relative to an increment of 50 RS units.
